Did a quick search on Polaris 651 code and Polaris XP 651 code and came up with an injector issue: Manual says it is Injector 1 (MAG) (SDI PART LOAD) Driver Circuit Grounded. Sounds like you may have one that's gone bad! Polaris should replace it w/o any questions - and it's a quick thing to change out - as long as they have the part in stock. Engine. As complicated as the Polaris General motor is, it makes sense that there are many ways that it can break or malfunction. But just because your check engine light turns on, doesn't mean you dropped a valve or broke a keeper. Belt slippage or water in the belt / belt housing are the most common reasons why the check engine light turns on, but it is also possible to have issues with the throttle sensor (the connector by the pedal) getting wet as well.
